

Accelerate and optimize your SAP move to the Cloud

Leverage our BTP app, Cloud PRISM, to streamline the selective migration of your SAP on-premises ERP, Payroll or BW systems to SAP S/4HANA[®], SAP[®] SuccessFactors[®], SAP Datasphere[®] and BW/4HANA[®].

Reduce migration
time by 50%

Cut costs by
up to 50%

Minimize risks to
near-zero

Proprietary software-
driven approach

Your SAP systems are central to your business operations. Finding a solution that minimizes risks and speeds up transition to the latest SAP version can determine the success of your transformation project.

With the end of SAP support for some legacy products, a clear modernization roadmap is essential. The advantages of cloud deployment are increasingly apparent; the challenge lies in adopting cloud capabilities without a disruptive and costly full-system migration.

Options to adopt the latest technology include moving to SAP S/4HANA[®] or SAP Cloud Payroll[®], and new analytics platforms such as BW/4HANA, Datasphere, and the SAP Business Data Cloud.

You may choose to reduce rising OPEX costs by only taking required Production data to your high-performance live systems, while archiving historical, static data in a cost-effective, secure platform, accessible on demand whenever required.

You could also restructure your systems during the move to S/4HANA's more flexible financial structures, or only migrate selected company codes. You may want to retain Payroll configuration, but only move selected countries or years of history. In analytics, you may choose to select high-value strategic reporting to bring into the new system, and regenerate other operational reports.

An automated, selective approach can both de-risk your data migration, and lower rising OPEX costs. With this approach, you can transfer your budget to cloud innovation, rather than maintaining decades of history and outdated configurations in a high-cost core system.

The solution: Cloud PRISM

Cloud PRISM, a BTP application from EPI-USE Labs, streamlines your migration to the cloud. Regardless of the SAP cloud option you select, our Cloud PRISM solution enables an automated and cost-effective transition. Using a selective Extract, Transform, Load (ETL) process, Cloud PRISM minimizes technical conversion activities and business impacts typically associated with transformation projects.

Cloud PRISM aligns with our PRISM approach, a proven, best-practice process for success, combining world-class SAP consultancy expertise with leading-edge, SAP-certified acceleration software to ensure a successful transition.

With Cloud PRISM, you can selectively transition data from on-premises systems to the cloud, verify data accuracy, and report on all data throughout the process. And with our Archive Central solution, we can also decommission any historical data you prefer not to move to the cloud, giving you secure, role-based access to your legacy data. With one software solution, you can separate data into two streams: data for live Production systems, and data to be archived.

Our Cloud PRISM solution includes a free system assessment up front to help you make informed decisions on how to optimize your migration. The assessment consists of an SAP transport which collects critical structural data from your system, without exposing any confidential system data; you then get insights into the analysis via an interactive, user-friendly web dashboard.

Benefits of Cloud PRISM

- Automate the selective transition of data from ERP core, Payroll and Analytics SAP systems
- De-risk data migration from your S/4HANA project's critical path with a proven software solution
- Optimize your SAP landscape by taking only the data you need
- Embed data privacy considerations into how you build the target landscape (optional)
- Lower both your project cost, and your ongoing OPEX costs

The major benefit for us was the time savings. The data went up in 12 hours, which is a small fraction of the time it could have taken us. The value of the PRISM Migration Service is how quick it is; and there are no errors. It's a seamless process. It took away the manual process, and took out the room for error.

Don Parker, AGM of IT Department, North American Lighting

EPI-USE Labs consultants know the SAP Data model, and could advise us on the best possible strategy for migrating the data. We were able to transform our on-premises Payroll to a cloud environment without re-implementing Payroll, keeping all the value from our SAP Payroll while modernizing our landscape. Having EPI-USE Labs help us to deliver the migration on time and within budget meant we could focus on the overall project.

Edwin van Teeffelen, SAP Project Manager, PostNL

As a global software solutions and managed services company, EPI-USE Labs helps you to maximise the performance, management and security of your SAP® and SAP SuccessFactors® systems. Our clients tell us every day how we have transformed their business operations. Contact us to find out how we can help you solve your business challenges.
